Exemplar

Acceptance criteria

- From a podcast page, the user can tap a heart to mark it as a favourite quickly and easily.
- Favourited podcasts show up in a favourites area so they are easier to find later.
- If there's no internet, it should still work somehow or try again soon.
- Pressing the heart again should remove it from favourites.
- The app should look normal while this happens and not be confusing.

User story

As a **Spotify podcast listener** who uses the app in many situations, I want the ability to **mark any podcast as a favourite** in the app so that I can **find it again later without hunting around or searching all the time across different parts of the app, especially when I have lots of shows saved already**.

User story – Rubric match

User Story Look-fors 👀	Developing	Proficient	Advanced
Clear user need (who / what / why)		Uses "As a… I want… so that…" with a clear user and benefit.	
Clear order and layout	Story and acceptance criteria are mixed together or hard to follow.		
Short and easy to read	Wordy or unclear; grammar issues get in the way.		

Acceptance Criteria – Rubric Match

Acceptance Criteria Look-fors 👀	Developing	Proficient	Advanced
Given/When/Then, testability	Vague steps; not in Given/When/Then; hard to test.		
Specific and measurable details	Uses fuzzy words like "fast" or "easy."		
Right for the audience and purpose		Scenarios match the intended user and purpose.	
Correct terms and format	Misuses or skips key terms/formats.		

NOTE

This exemplar mixes order (criteria given first), avoids Given/When/Then, and uses vague wording—so it lands as **Developing** overall while still showing a few **Proficient** elements.
